

# Linux and Beyond

Prepared By: Aatiz Ghimire, for Herald Center for AI.

Summer, 2025

## 1 Learning Objectives.

---

- Understand Linux filesystem navigation and user permissions.
  - Gain hands-on experience in compiling software from source.
  - Develop basic and advanced Bash scripts.
  - Learn resource monitoring and lightweight system diagnostics.
  - Build a script for real-time system data logging.
-

## 2 Follow Along

### Folder Navigation

Command	Description
<code>sleep 60</code>	Sleep for 60 seconds.
<code>CTRL + C</code>	Interrupt the command.
<code>cd</code>	Switch to your home directory.
<code>pwd</code>	Print the current working directory.
<code>ls</code>	List directory contents.
<code>ls -a</code>	List all files including hidden ones.
<code>ls -l</code>	List files in long format.
<code>ls -la</code>	List all files in long format.
<code>mkdir shell-ex</code>	Create folder named <b>shell-ex</b> .
<code>cd shell-ex</code>	Enter the <b>shell-ex</b> directory.
<code>mkdir "delete me"</code>	Create a folder named <b>delete me</b> .
<code>rmdir delete me</code>	Tries to remove directories <b>delete</b> and <b>me</b> separately (will fail).
<code>rmdir "delete me"</code>	Correctly removes the folder named <b>delete me</b> .
<code>ls -a ..</code>	List all files in the parent directory.

Table 1:

### Help Commands

Command	Description
<code>mkdir --help</code>	Display help for the <b>mkdir</b> command with usage and options.
<code>man mkdir</code>	Open the manual page for the <b>mkdir</b> command.
<code>q</code>	Quit the pager when reading a man page.
<code>man --help</code>	Show usage options for the <b>man</b> command itself.
<code>man -h</code>	Another form to get usage info for <b>man</b> .
<code>man man</code>	Open the manual for the <b>man</b> command.
<code>whatis man</code>	Show a short description of what <b>man</b> does.
<code>man 7 man</code>	Open section 7 of the manual for <b>man</b> (conventions, macros, etc.).

Table 2:

## Permissions

Command	Description
<code>cd /shell-ex</code>	Navigate to shell-ex directory
<code>mkdir perm-ex</code>	Create a folder named perm-ex
<code>cd perm-ex</code>	Enter the perm-ex directory
<code>touch file.txt</code>	Create an empty file file.txt
<code>mkdir folder</code>	Create a subdirectory named folder
<code>ls -la</code>	List all files and folders with permissions
<code>chmod a-r file.txt</code>	Remove read permission for all users on file.txt
<code>chmod a-r folder</code>	Remove read permission for all users on folder
<code>ls -la</code>	Check updated permissions
<code>ls folder</code>	Try to list contents of folder (expected to fail)
<code>cat file.txt</code>	Try to read file.txt (expected to fail)
<code>touch folder/newfile.txt</code>	Still possible to create new files
<code>chmod a= file.txt</code>	Remove all permissions on file.txt
<code>chmod a= folder</code>	Remove all permissions on folder
<code>rm file.txt</code>	Try deleting file.txt (expected to fail)
<code>rmdir folder</code>	Try deleting folder (expected to fail)
<code>chmod u+r folder</code>	Add read permission back for user
<code>ls folder</code>	Attempt to list folder contents
<code>touch folder/file2.txt</code>	Try to create a new file (expected to fail)
<code>chmod u+w folder</code>	Add write permission to folder
<code>touch folder/file2.txt</code>	Try again to create a file (still fails)
<code>chmod u+x folder</code>	Add execute permission (needed for access)
<code>touch folder/file2.txt</code>	Successfully create file after execute permission

Table 3:

## Nano Editor

Command	Description
<code>cd ~/shell-ex</code>	Navigate to the shell-ex directory
<code>mkdir nano-ex</code>	Create the nano-ex folder
<code>cd nano-ex</code>	Enter the nano-ex directory
<code>nano</code>	Start editing in a new nano buffer
Write some text and one long line	Compose content in the editor
<b>CTRL</b> + <b>O</b>	Save the file (name it <code>file.txt</code> )
<b>CTRL</b> + <b>X</b>	Exit nano
<code>cat file.txt</code>	View contents of the saved file
<code>nano file.txt</code>	Reopen the file for editing
Make a change	Edit the file content
<b>CTRL</b> + <b>X</b>	Attempt to exit nano
Prompt: <b>y/n</b> + <b>ENTER</b>	Respond to the save prompt on exit

Table 4:

## File and Folder Operations

Command	Description
<code>cd ~/shell-ex</code>	Change to the shell-ex directory
<code>mkdir operations-ex</code>	Create directory named operations-ex
<code>cd operations-ex</code>	Enter operations-ex
<code>mkdir folder</code>	Create a subdirectory named folder
<code>touch file</code>	Create an empty file named file
<code>mv file folder</code>	Move file into the folder directory
<code>mv folder/file file.txt</code>	Move file out and rename it to file.txt
<code>cp file.txt folder</code>	Copy file.txt into folder
<code>cp folder folder2</code>	Attempt to copy a folder (fails without -R)
<code>cp -R folder folder2</code>	Recursively copy folder to folder2

Table 5:

## Environmental Variables

Command	Description
<code>echo \$HOME</code>	Print current user's home directory
<code>echo \$PWD</code>	Print current working directory
<code>echo \$PATH</code>	Display current PATH variable
<code>echo -e \$PATH//:/:\\n</code>	Show PATH entries each on a new line
<code>printenv</code>	List all environment variables
<code>export HELLO=hello</code>	Create an environment variable
<code>echo \$HELLO</code>	Print the value of HELLO
<code>export HELLO="\$HELLO world"</code>	Append to the variable HELLO
<code>echo "\$HELLO"</code>	Print expanded value
<code>echo '\$HELLO'</code>	Print literal string without expansion
<code>unset HELLO</code>	Remove the environment variable HELLO
<code>echo \$HELLO</code>	Verify that HELLO has been unset
<code>nano ~/.bash_profile</code>	Open bash profile for editing
<code>Add: [[ -f ~/.bashrc ]] &amp;&amp; . ~/.bashrc</code>	Ensure .bashrc is sourced from .bash_profile
<code>Save and exit nano &amp; Save your edits and exit</code>	
<code>nano ~/.bashrc</code>	Open .bashrc for editing
<code>Add: export HELLO=hi</code>	Add a default HELLO variable
<code>Add: alias ll='ls -la'</code>	Create alias ll for detailed listing
<code>Save and exit nano</code>	Save your edits and exit
<code>source ~/.bashrc</code>	Apply the new changes
<code>ll</code>	Use the new alias
<code>echo \$HELLO</code>	Verify HELLO variable from .bashrc

Table 6:

## Processes

Command	Description
<code>top</code>	Get an overview of current resource usage
<code>htop</code>	Get a better overview (with UI) of current usage
<code>ps</code>	List all your currently running processes
<code>ps -ef</code>	List all system-wide running processes
<code>sleep 60 &amp;</code>	Run <code>sleep</code> in background
<code>kill PID</code>	Kill a process by PID (returned from <code>ps</code> or <code>sleep</code> )
<code>export HELLO2=hi2 &amp;&amp; echo \$HELLO2 &amp;&amp;</code>	Chain multiple commands using <code>&amp;&amp;</code>
<code>unset HELLO2 &amp;&amp; echo \$HELLO2</code>	

Table 7:

## Reading and Searching

Command	Description
<code>cd ~/shell-ex</code>	Change to the shell-ex directory
<code>mkdir read-search-ex</code>	Create read-search-ex directory
<code>cd read-search-ex</code>	Move into the new directory
<code>man man &gt; man.txt</code>	Redirect the manual page of <code>man</code> to a text file
<code>head man.txt</code>	View the first 10 lines of <code>man.txt</code>
<code>tail man.txt</code>	View the last 10 lines of <code>man.txt</code>
<code>head -n 20 man.txt</code>	View the first 20 lines of <code>man.txt</code>
<code>grep manual man.txt</code>	Show all lines containing "manual"
<code>grep -c manual man.txt</code>	Count occurrences of "manual"
<code>grep -wc manual man.txt</code>	Count occurrences of "manual" as a whole word
<code>cp man.txt man2.txt</code>	Copy <code>man.txt</code> to <code>man2.txt</code>
<code>nano man2.txt</code>	Open <code>man2.txt</code> for editing
<i>Edit and save file</i>	
<code>diff man.txt man2.txt</code>	See differences between original and edited file
<code>wc man.txt</code>	Show line, word, and byte count of <code>man.txt</code>

Table 8:

## Redirection and Piping

Command	Description
<code>mkdir ~/shell-ex/redirect-ex &amp;&amp; cd ~/shell-ex/redirect-ex</code>	Create and move into directory <code>redirect-ex</code>
<code>ps -ef &gt; p.txt</code>	Redirect output of <code>ps</code> to file <code>p.txt</code>
<code>echo \$HOME &gt;&gt; p.txt</code>	Append <code>\$HOME</code> value to file <code>p.txt</code>
<code>tail p.txt</code>	View the last lines of <code>p.txt</code>
<code>ps -ef   grep ssh</code>	Pipe <code>ps</code> output to <code>grep</code> to search for <code>ssh</code>
<code>ps -ef   grep -wc root</code>	Count the number of <code>root</code> processes
<code>ps -ef   grep root   sort -nk 2   head</code>	Show first 10 root processes sorted by PID
<code>ps -ef   head -1; ps -ef   sort -r -nk 3   head -15</code>	Show top 15 CPU-consuming processes
<code>!!</code>	Re-run the last command
<code>echo "alias bycpu='!!'" &gt;&gt; ~/.bashrc</code>	Create alias <code>bycpu</code> for previous command
<code>source ~/.bashrc</code>	Reload bash configuration
<code>bycpu</code>	Test the new alias <code>bycpu</code>

Table 9:

## Bash History

Command	Description
<code>history</code>	View your command history
<code>history   grep ps</code>	Find all commands including <code>ps</code>
<code>history   less</code>	Open history in a pager
<code>!NUMBER</code>	Execute a specific command from history using its number
<code>!ps</code>	Run the last used command starting with <code>ps</code>
<code>!?grep</code>	Run the last used command containing <code>grep</code>

Table 10:

## wget & curl

Command	Description
<code>mkdir ~/shell-ex/wget-curl-ex &amp;&amp; cd !# 1</code>	Create directory and switch to it; <code>!# 1</code> evaluates to the second word of previous command
<code>wget heraldcollege.edu.np</code>	Downloads the HTML content into <code>index.html</code>
<code>wget -O herald.html heraldcollege.edu.np</code>	Saves the downloaded content as <code>herald.html</code>
<code>curl heraldcollege.edu.np</code>	Prints the content to the shell (does not follow redirects)
<code>curl -L heraldcollege.edu.np</code>	Follows redirects automatically
<code>curl -Lo herald2.html heraldcollege.edu.np</code>	Follows redirect and saves to <code>herald2.html</code>
<code>lynx heraldcollege.edu.np -dump   less</code>	Uses text-based browser to view content in a pager
<code>tar -cvzf herald.html.tar.gz herald.html</code>	Create tarball archive
<code>rm herald.html</code>	Remove original HTML file
<code>tar -xvzf herald.html.tar.gz</code>	Extract tarball archive
<code>zip herald.html.zip herald.html</code>	Create ZIP archive
<code>rm herald.html</code>	Remove HTML file again
<code>unzip herald.html.zip</code>	Extract ZIP archive
<code>ls -alh</code>	Show file sizes in human-readable form

Table 11:

## Further Reading

- *Advanced Programming in the UNIX Environment*, 3rd Edition, by R. Stevens and S. Rago

## Task 2: Bash Scripting Basics

1. `cd`

*Switch to home directory*

2. `mkdir script-ex && cd !#:1`

*Create a folder for the exercises*

3. `nano first.sh`

```
#!/usr/bin/bash
echo "Hello World!"
```

4. Save and exit nano.

5. `chmod u+x first.sh`

*Add execution permission*

6. `./first.sh`

*Run it*

**Further Reading:** [https://linuxhint.com/30\\_bash\\_script\\_examples/](https://linuxhint.com/30_bash_script_examples/)

## Task 3: System Script

Create a bash script that gives an overview of the current system and its resource usage. Add the script as an alias to your `.bashrc`.

**Include Outputs From:**

- `hostname`
- `uptime`
- `uname -r`
- `arch`
- `w`
- `free`
- `hostnamectl`
- `lscpu`
- `hostname -I`

**Hints:**

- Use <https://www.shellcheck.net/> to validate syntax.
- `echo -e` enables escape characters like `\t`.
- `echo -e "Date: 'date'"` executes inline commands.
- `w cut -d ' ' -f1`— lists users.
- Colored output example:

```
RED='\033[0;31m'  
NC='\033[0m'  
echo -e "Default ${RED}colored text${NC}Blank text"
```

- Functions:

```
function name(){  
    # Function code  
}  
$(name)
```

————— The - End —————
